

10' Bag Flattener Inclined Conveyor

Industrial bag flattener, 10 ft long 15° inclined conveyor with an opposed 5½ ft. long conveyor with parallel linkage and adjustable spacing for various bag thicknesses. The unit consists of two 24" (60 cm) wide rough top belts, independent of one another and driven by separate gear motors

Designed to flatten bags so that they can be palletted with more precision. Bags that have been flattened tend to make pallets squarer, hold together better and have less freight damage than pallets with unflattened bags.
